# Niko Home Control

## The whole family loves it

### The dad

Oliver is 38. When his house was designed, his family came first. He asked for a safe home where life would be comfortable. Convenience was paramount. He finds those three aspects in Niko Home Control.

### The mum

His wife, Caroline, is 37. She is constantly on the go for her family. Twice a week she does yoga to have some me time. Occasionally she escapes with Oliver whilst grandmother Anna looks after the children. Her children's safety is what is most important to her.

### The son

Max is 12 and the explorer of the house. He is allowed to come home on his own and can't wait to have more independence. The more he can do on his own, the better, however his teenage mood swings occasionally throw a spanner in the works.

### The daughter

Louise is 5 and wants to hold her own with her big brother. Even though she remains the little girl in the house. She loves Niko Home Control **because the installation is also easy for her as a little girl.**

### The (grand)mother

Anna is 69. As a lively granny she helps out where she can. Caroline's mother finds peace in the convenience of Niko Home Control. With one press on the button she can switch off all the lights in the house or she can immediately set the lighting in the living room to the right position. When the family is on holiday, she turns on the presence simulation. **That way she feels at ease and does not have to come over every evening.**

Discover what Niko Home Control can do for your family.

# Introduction

## Your home works better with Niko

Live more comfortably and safer, whilst saving maximum energy. Niko Home Control is the new electrical installation that allows you to control the lighting, heating, ventilation, roller blinds, air conditioning and curtains from a central location in your home or anywhere in the world and stay in control of your front door. All in a sleek and timeless design.

### Time for a new electrical installation

The traditional phone has been ousted by mobile phones and smartphones, whilst iPods and MP3 music players toppled the CD from first place. Due to WhatsApp and other apps, SMS text messaging has declined in popularity. We live in a digital age in which technology is evolving ever quicker. We are online, always and everywhere.

But meanwhile, what happened to the electrical installation? Very little: the general set-up of electrical networks and the options they offer have largely remained unchanged over the past 30 years. This is very surprising, when you consider the major changes we have witnessed in our way of life and in the way we communicate with the rest of the world. Niko thinks it's time for change and improvement. Niko Home Control is redefining the electrical installation in terms of comfort, safety, ease of use and energy consumption.

### Established market presence

As the market leader, Niko is a well-known name in Belgium. In the rest of Europe, we have also gained a strong footing, especially in the UK where our solutions are becoming the first choice for new projects. Especially when it comes to Niko Home Control, which we are continuously updating according to the latest trends.

### Always connected

An electrical installation that is always connected? This has quite a few benefits. You know what's happening in your home anytime and anywhere, and you control your lighting, roll-down shutters, sun blinds, etc. with your smartphone. You also connect your installation with other smart systems in your home. Below is a selection of brands that have already adjusted their systems to Niko Home Control. Discover them all on [www.niko.eu](http://www.niko.eu).

# The standard installation

## Treat yourself to intelligence and flexibility

A conventional electrical installation? That's a thing of the past. It doesn't evolve with you. **With Niko Home Control you choose in favour of an intelligent and flexible electrical installation.** Need an extra switch? Or perhaps you want to replace a switch with a motion detector? Or dim the lighting rather than turn it on and off? It's done in a flash. The standard installation immediately provides your home with everything it needs to offer you more comfort, safety and energy saving features (today or later).

### Your home within reach of your smartphone

You always have your smartphone on you. Thanks to Niko Home Control, you are in control of your home with your smartphone.

### In-built alarm and alert service

Unwelcome visitors? Are the children coming home? Your home sends you a message to say they are there, or its deters unwanted visitors by switching on all the lights. That way, with your smartphone, you always know what is going on in your home, wherever you go.

### Go on holiday with peace of mind

In addition to the alarm service, your home can also simulate your presence via the lighting. This will make it seem like you're at home.

### Sleep easily

Can you hear a strange noise in the night? With the panic function, you switch on all the lights and your designated persons receive a message. Unwelcome visitors will be immediately scared off.

“When we built our house, we were not sure yet what we wanted in it or what our family would look like. That's why we chose the Niko Home Control standard installation. That way we can always adjust our electrical installation to our changing needs. You cannot do that with a traditional installation”

Oliver

#### **Operate your lighting in an instant**

With Niko Home Control, you can control several light points together or separately. That way, you can define areas and create atmosphere and comfort. Or go to sleep after you have put your home in sleep mode.

#### **Switch everything off in one go**

With an all-off button at the front door, you can switch off all the lights and appliances which do not need to be on, in one go. You can do this with your smartphone wherever and whenever.

#### **Operate your socket outlets as well**

Not all socket outlets have to be permanently connected. With Niko Home Control, you can switch them off for a while.

#### **Adapt your installation yourself**

Do you want to adjust the timing of your lighting, change the alarm message on your smartphone or set up a new light mood in your living room? You can easily do that yourself in the user-friendly and easy-to-use software of Niko Home Control.

“*Niko Home Control makes it easier for everyone in the house. It is a very user-friendly system. Even Louise knows how to use everything. You never need to think twice. I love that.*”

**Caroline**

# More comfort

## Your house always within reach

Would you like more options in terms of comfort? Then you need organised central control, via a device which you always have to hand: your smartphone. With additional dimmers, motion detectors and mood control, you choose additional operating convenience and flexibility.

### Centralised control

With a touchscreen in a central place in the house, you can control everything: are all the lights turned off, is the heating still on anywhere or is there someone at the door?

### The perfect atmosphere for every moment

With the mood control and several dimmed lights, you can create the right atmosphere in the right place at the touch of a button.

### Switch the lights on automatically

A motion detector automatically turns on the light in the toilet or storage area when you enter the room. The light will go off when there is no longer any movement.

### Stay sound asleep

'At night, the light on your landing will automatically switch on softly at 30% as soon as someone gets up.

### Welcome your guests

Is it getting dark? Then the outside lights will automatically turn on when someone approaches your house. In addition to saving energy, you deter unwelcome guests.

### Music where you want it.

The right atmosphere in your home is not just about lighting. Also music. With the connection to Sonos or Bose installations, you can create the perfect atmosphere in no time at all. Why not connect your music installation to the detectors? This way, the music blasts through the speakers to scare off unwanted visitors.

“I can do lots of things on my own, just like Max. At night, I don't have to wake mummy and daddy when I need the toilet. There are always small lights on in the corridor and in the bathroom the light goes on automatically as soon as I enter.”

Louise

# Living safely

## Because at home you want to feel safe

At home, you want to feel safe. You want to be sure your children and your home are protected. That way you can relax with peace of mind in your own home. With Niko Home Control, you always know what is happening at home. Are your children coming home from school, or is there unwanted movement when you are out? Your home will warn you with an alert. Wherever you are.

### Secure the access to your home

Install detectors on your windows and doors which can activate the alarm function. The lights are activated or start flashing and you will immediately receive a message on your smartphone.

### Don't give fire a chance

Is the alarm of a fire detector going off? Then the roller shutters automatically open for additional escape routes and you will receive an instant message on your smartphone.

### Peace of mind when you are at home alone

Can you hear something suspicious during the night? You can turn on all your outside and inside lights on by pressing the panic button.

### Extra detectors

With additional detectors in and around your home, you give unwelcome guests even less chance to enter your home. So your home can deter them and warn you.

### A secret code that only you know.

With the code keyboard, you alone can deactivate the alarm function when you get home.

### Find out who is at your front door

Thanks to a video phone at your front door, your touchscreen, smartphone or tablet tells you who is at the door. This is possible on your smartphone or tablet even when you are out.

“When I come home from school with Max and Louise, they immediately have my full attention. As soon as we are inside, Caroline will receive an alert on her smartphone. I do not have to turn on the heating or lights everywhere. Everything happens automatically with one push on the button. I have all the time in the world to spoil my little rascals with a cup of soup or other treats.”

Anna

# Smart heating, smart ventilation And consume less

Control your roll-down shutters, sun blinds, ventilation, heating, etc., in a smart way too. The all off button also turns down the ventilation to a minimum and reduces the heating. Thereby limiting your energy consumption. On the ecodeisplay, the touchscreen or your mobile phone, you can see exactly how much energy you are producing with your solar panels.

## Fresh air at all times

With the smart ventilation control, your ventilation will automatically turn up or down. Are you going out? The ventilation will automatically switch to the lowest setting.

## Heating only when it is necessary

When you go on holiday, Niko Home Control not only watches over your home. Your heating will also switch to eco setting. The day before you get home, you can switch everything back on via your smartphone.

## Automatically control your roll-down shutters, sun blinds and curtains

You can save yourself a lot of hassle by controlling your roll-down shutters, curtains and sun blinds automatically. You decide when and how you shut them.

## Opt for an energy-efficient home

Did you know you can easily make energy savings of up to 15% when you know how much you are consuming? The ecodeisplay and your tablet or smartphone will tell you exactly how much electricity you consume on a daily, weekly, monthly and yearly basis.

## Nice and warm, only where necessary

With zone heating, you can heat each room in the house separately at different times and temperatures.

“ In the morning, I am always the last one to leave the house. Occasionally I forget something, but Niko Home Control helps me. Before opening the door I push the all-off button. It turns off all the lights. That way nothing stays turned on and I make sure we use less energy. ”

Max

# Easy to operate

Niko Home Control can be operated with push buttons, a touchscreen, your smartphone or a tablet. You can add additional controls without having to perform any work or add cabling. A maximum of 4 push buttons or control points can be included in a flush-mounting box. Therefore easily replacing one push button by two.

## Push buttons

With Niko you are choosing a contemporary look. Niko Pure, Niko Intense, Niko Original: each finishing range consists of different colours. For each control you can choose from single, 2- and 4-fold push buttons with or without LED. You can clearly see what each push button controls and whether a function has been enabled. The socket outlets fit nicely with the controls.

## Types of push buttons

- lighting control
- dimmers
- push buttons for roll-down shutters, curtains, sun blinds, ventilation
- eco-display
- mood control
- thermostat

## Touchscreen

With the touchscreen you can control everything in the house from a central place. You can turn the lights on and off, dim them, turn the heating up or down, operate your roll-down shutters and curtains, talk to your visitors at the front door ... The best spot? Your living room or kitchen.

## Smartphone/tablet

You can operate Niko Home Control from anywhere with the free app on your smartphone or tablet. As easy as switching the light on and off. The convenience to be able to turn off the light when it is still on somewhere, to receive a notification or to turn up the heating before you arrive home.

“Everyone can operate Niko Home Control. Even little Louise and I. You never need to rush through the house to switch everything on and off. You control your entire home with one touchscreen, your tablet or smartphone.”

Anna

Niko designs electr(on)ic solutions to enhance buildings to better suit the needs of the people who live and work in them. By using less energy, by improving light comfort and safety and by making sure all applications work together seamlessly. Buildings with Niko appliances are more efficient, are controllable from a distance and interact within bigger ecosystems. Niko is a Belgian family business from Sint-Niklaas with 750 employees and 10 European branches.

At Niko we ask ourselves just one question every day: "How can we enhance buildings to better suit your needs?"
