

2 RJ45 connections UTP Cat. 6A, PoE++ ready, Niko Invisible, anthracite coated

122-10172

4 year warranty

This double RJ45 connection UTP in Niko Invisible design can be used to make a network connection with two devices for telephone, Ethernet, IP, PoE or internet applications.

A PoE adapter is required to transport data and power via the connector. A PoE adapter can be both a PoE injector or a PoE splitter.

A professional can customise the finishing set to coordinate with or blend into its surrounding surface for an ultra-minimalist look. It can be covered with any wallpaper and paint colour. And thanks to its enamelled finishing in the colour anthracite coated, you can even use it without any covering.

Dedicated Niko Invisible installation kits are available for brickwork and plasterboard, as well as a hole saw that facilitates application in plasterboard surfaces.

- Minimalist architectural design
- Blends into the wall
- Only a signature circular outline is visible
- Niko quality
- One product combines power and data
- RJ45 connectors approved for type 4 power
